- [UK](#)
- [United States](#)
- [Canada](#)

How to Begin

Please note: We're overhauling this section and creating a beginners guide, it just takes a lot of time and research. Please message the mods if you have anything you'd love to add!

1. **Research!** - Learn everything you can, use the resources below and ask questions.
2. **Plan it** - What is your goal, what do you want to see?
 - Talk to your local conservation/native plants society/master gardener etc. to get more information.
 - Check out [Wild Ones Garden Designs](#) or any other garden designer to help you plan
 - Do more research on plants for your yard, pick natives avoid invasive, make sure they'll work in your space
3. **Start small** - You don't have to do the entire yard, start with one garden bed and learn from your mistakes.
4. **Remove what you don't need** - Remove anything that isn't staying, grass, weeds, invasive species etc.
5. **Get to planting!** - Talk to your local conservation/native plants society/master gardener or nursery to figure out the best time to plant, and the best way to plant each type of plant in your space
6. **Maintenance** - Follow the advice for your plants to maintain them through their first year. If they're native, you'll generally have less maintenance over time.
7. **Enjoy!** - Seriously, you did it, it's beautiful, enjoy it before you decide to take on another project.
8. **Share your experience** - Help others learn from you, did you make a mistake? Share it so other people can avoid it. Did you learn something really cool? Let us know, make a post. Share some before and afters and let us know how long it took and what steps you took.
