This will be a short guide on how to create a namespace on this Wiki for a Lemmy community on SLRPNK.

You can log into this Wiki with the same username and password as you use on the SLRPNK Lemmy instance. If you don't have an account there yet, please apply for one over there.

Due to a current limitation of the account integration, you need to register with an email address and configure a display name, but we are working on fixing this.

This Wiki is configured to automatically grant specific editing rights to all moderators (with local accounts) of communities on our Lemmy instance.

For example if you are the moderator of the /c/buyitforlife community, you get editing rights on the buyitforlife namespace on this Wiki. Each namespace also has its own dedicated side menu you are allowed to edit.

If the namespace has not been created yet, just use the URL input bar of your browser and add "/your-community-name:start" to the end of the Wiki address, but with the name of the community you moderate instead of "your-community-name", similar to the above example. The ":start" part represents the landing page of your wiki namespace that you can link to. You can also create other pages on your wiki by replacing ":start" with something else, for example ":links".

To edit a page you can use the top left menu and select "edit this page" or use the little pen icon that should be visible near the text.
